

Shower Manager Saves Water, Energy & Money

How would you like to Save Water, Energy & Better Manage Your Hot Water Reserves?

Now you can with this new product called the Shower Manager. It is the only automated water conservation device available that gives bathers the best of both worlds... an invigorating full flow of shower water followed by a water-saving reduced flow. This reduced flow is a gentle yet effective reminder that it is time to exit the shower but still allows the bather to finishing rinsing.

FULL-FLOW MODE

High-tech Simplicity

The Shower Manager is easy to install and program. There is no need to hire a plumber as the Shower Manager fits between the shower neck and your existing showerhead. You set the time limit of your choice, say 5, 8 or 11 minutes, using the key provided. Don't worry if you change your mind you can easily reset the time limit. This allows you to experiment with the time limit that best fits your needs.

CONSERVATION-FLOW MODE

Fair Warning

To alert the bather of the impending time limit the Shower Manager sounds a warning beep that indicates the bather has 60 seconds of full-flow time left. After the full allotment has elapsed the water flow is cut by 2/3 leaving a trickle for the bather to finish rinsing off.

1 Beep = 5 Minutes
2 Beeps = 8 Minutes
3 Beeps = 11 Minutes

Cheaters Never Prosper

To prevent bathers from extending the allotted time there is a five-minute reset interval. We found five minutes is the ideal time to discourage bathers from cheating but not so much time to inconvenience the next bather.

The Smart Way To Save

Visit our web site today to try our water conservation savings calculator, it is the fast and easy way to see just how much you can save!
